

Codefest 10

Hardware for Artificial Intelligence and Machine Learning (HW4AI)

ECE 410/510

Spring 2026

Overview

This codefest is a single challenge, completed in class without any AI assistance. Topic: design defense and final exam preparation. There is nothing to commit to GitHub; you turn in your signed question sheet at the end of the session.

CMAN — Paired oral defense (no writing, no AI)

There is no writing in CMAN. Get together in a team of two with a student working on a different project, and bring your individual question sheet. Take turns: your partner reads the questions from your sheet aloud and you answer out loud, explaining the decision behind each one and the value or part of your design it rests on. Then switch roles. Keep your repository and all LLM tabs closed; you answer from your own understanding.

Tasks

1. Form a team of two with a student on a different project. Each of you brings your own question sheet.
2. Take turns: your partner first reads the **3 core questions** followed by **2 additional questions** from your sheet aloud and you answer out loud, explaining each decision and the value or design detail it rests on. Then switch.
3. Answer from your own understanding, with your repository and all LLM tabs closed. Nothing is written or submitted for CMAN.
4. At the end of the session, sign your partner's sheet to confirm the defense took place, and turn in your own signed question sheet to the instructor.

CMAN NO AI

Deliverable: your signed question sheet, turned in to the instructor at the end of the session; your partner's signature confirms the paired defense took place. There is nothing to commit to GitHub for this codefest.
